

IS TECHNOLOGY A BANE OR BOON

INTRODUCTION:

Technology is the result of the practical application of science. Science is referred to as knowledge or idea that originates in us after observation. This idea with creativity results in a technological invention.

TECHNOLOGY SHOULD NEVER DOMINATE OUR LIFE:

Technology has no doubt has made our life comfortable. People nowadays are totally depend on technology. It has benefited in every sector like education, medicine, agriculture, defence, industrial, etc. The development of computers is a miracle for the entire mankind. In total it can be stated that advent of technology is helpful for human beings.

The most important thing we should keep in our mind is that technology should not dominate our life. If we become the slave of technology will totally ruin our lives. Therefore we must bring technology in use only when it is required. The birth of Artificial intelligence is the result of advancing technology. Its development will gradually deplete the role of humans in future.

TECHNOLOGY – IT IS A BLESSING WITH WORRIES:

Technology is the greatest innovation for mankind. Technology has greatly helped in reducing the time, effort and energy for doing any of the work because of the development of efficient tools and machinery. It is said to state that this blessing is accompanied by worries. It is because technology also has negative impacts if not utilized properly. The excessive use of technology results in environmental degradation and that is not a positive sign. Moreover, the negative use of technology can also cause destruction.

HOW IS TECHNOLOGY HELPFUL IN EDUCATION?

Technology has totally changed the way of teaching and learning. The blackboard, chalk and dusters have been replaced by the smartboard and smart classes. The invention of computers has bought a revolutionary change in our life. Today there are different changes of models and advanced forms of computers available in market like laptops, iPad, notebooks, smartphones, etc. In colleges, students are asked to bring laptops, especially in professional courses. It is easier to carry a laptop instead of a heap of notebooks. Many universities have started online examinations for students. The earlier pen and paper based competitive exams have been replaced by online mode of examination.

Thus it can be stated that all things are possible because of the advancing technological tools.

POSITIVE ASPECTS OF TECHNOLOGY:-

REDUCES THE WORKLOAD:

The development of technologies has made our life relaxed and comfortable. We can easily complete different tasks in reduced time without wasting our energy. We cannot live without refrigerators, fans, washing machines, gas stoves, air conditioned, etc. Moreover, everything we use in our everyday life involves the use of technology.

SAVE TIME AND EFFORT:

Earlier in the offices there were no computers and the calculations and account maintenance works were performed manually. The manual working process required a lot of time and energy. The development of computers has become a boon. Today there are computers in every office and they can store a large amount of data and information.

A NEW LIGHT TO THE FIELD OF MEDICINE:

Technology has given new hope to the field of medical science. The mortality rate due to disease was higher in the past as there were no such devices to diagnose the disease and no cure for the serious disease. This situation has been changed by the development of several devices that can easily diagnose the disease.

NEGATIVE ASPECTS OF TECHNOLOGY:-

CAUSING POLLUTION:

The advancing technology is also responsible for the rise in the pollution level on earth. The invention of different types of vehicles, air conditioners and thermal power plants release the gases that are harmful as well as the causes of air pollution. The heap of electronic devices gives rise to E-waste. Overall there are some disadvantages of every emerging technology and it is a serious concern.

SAFETY ISSUES:

Access to social media via computers is a great way to know about the people of the world and their ideas. The use of computers can be dangerous too if our personal information is leaked and misused. Many times the detail of our account are hacked and we have to suffer from the insignificant loss. Thus the technology is useful but can also lead to someone issues like hacking, identify theft, stocking, cybercrimes, etc.

DESTRUCTION AND WARFARE:

Several deadly weapons, biological weapons, and explosives can be created by using technology. There are some sharper minds who are involved in making these technologies a tool for the destruction of the world.

IS TECHNOLOGY A BOON OR BANE?

Technology can be referred to as the greatest blessing to mankind. We have attained a great height in different fields that have been possible because of technological developments. No doubt it is a boon for us but it depends upon the way we are utilizing it. If we are making use of the technology in a limited manner it will be never a bane to us but can be a bane if used excessively or negatively.

CONCLUSION:

Technology is easy to be spelled of but has a very vast explanation. Its application has changed our life from nomadic dwellers to civilized people of today. It totally depends upon us that how we will be utilizing the same.
